

GROWER EXPERIENCES USING SAMURAI® SYSTEMIC INSECTICIDE FOR FRUIT FLY CONTROL UNDER PERMIT NUMBER - PER80790

"I found Samurai very easy to apply and it worked well in keeping my fruit fly numbers low. It was used in a program together with baiting, lures and traps, and this approach worked as well as the old fenthion program."

Gordon Schultz
Bangalow's Best
Bangalow NSW

"This year my program to control fruit fly included Samurai and Maxx Organosilicone Surfactant™, and it certainly proved itself to be part of the answer – together with the other components including hygiene, netting, baiting, trapping and lures. There were no issues with Samurai and I will continue to use it to protect my stone fruit."

Robert Hood
High Valley Orchard
Newrybar NSW

"This year would have been a disaster without Samurai to control fruit fly in my peaches. I used it in a program as close as possible to harvest, and only had a very small number of fruit with maggots in them. Samurai will be a permanent part of my program going forward."

Ray Zahra
Yenda NSW
